

# ROYAL GREENLAND'S MOVILIZER APP FOR QM ENSURES SWIFT QUALITY INSPECTIONS.

The quality inspectors do their work more quickly and efficiently

**“With Movilizer, the quality data is in SAP within one day, where before we had to wait seven to ten days. Also the audit in the factories of the finished goods and the inspections of external vendors’ deliveries of raw fish has improved in efficiency and validity.”**

*Marianne Schou Faber,  
QM responsible SAP Consultant Royal Greenland*

## Key Solution Features

- ✓ Full SAP integration
- ✓ Offline capabilities
- ✓ Low TCO and investment
- ✓ Little implementation efforts
- ✓ Hardware performance in hostile environments
- ✓ 100% data security

The quality inspector uses the Movilizer App while working in a cold storage.

customer's choice. With the Movilizer for SAP QM, Royal Greenland is able to automatically address any inspection lot to the right inspector in the field. On his mobile device, the inspector receives the list of inspections to perform. By using well known devices and an optimized user interface, inspectors were able to learn and implement the app very quickly. When entering data, the mobile app acts on the rules and dependencies as if the data was entered directly in SAP.

Since Movilizer requires no new infrastructure, the SAP team of Royal Greenland performed the add-on and system preparation within a few hours and was then basically ready to go mobile.

## THE RESULT

The faster appearance of quality data in the SAP back-end makes the trading and production much more efficient, since the lots can be handled immediately, without administrative waiting time.

"It has really made the process much easier and accurate for me," says Marianne, one of the inspectors in Denmark. In China, the inspectors are used to spending many unproductive hours on entering the data afterwards into SAP, due to very long response times. "Now, our Chinese inspectors collect data during the day and let the device synchronize during the evening and

night. Next day, they are again ready to inspect new lots on their devices," says Marianne Schou Faber, QM responsible SAP consultant at Royal Greenland.

"Also the audit in the finished goods factories and the inspections of external vendors' deliveries of raw fish has improved in efficiency and validity,"

she says. "With Movilizer, the quality data is in SAP within one day, whereas before we had to wait seven to ten days." Royal Greenland has stated that Movilizer is their mobile platform of choice to build future scenarios on. With the easy and fast approach of Movilizer to any SAP back-end process, Royal Greenland has taken away any concern about complexity and minimized the biggest costs in their mobility strategy.
